

Jamaica Class

April 2017

This term we have been learning more about animals and improving our geography skills by locating where animals live around the world.

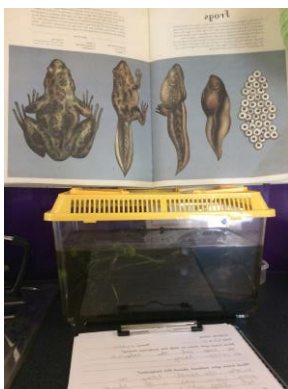

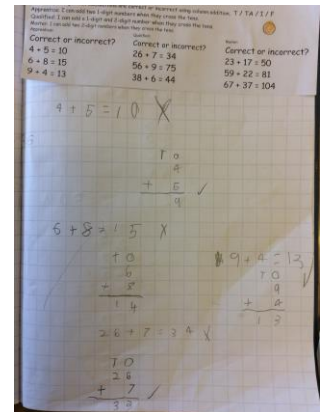

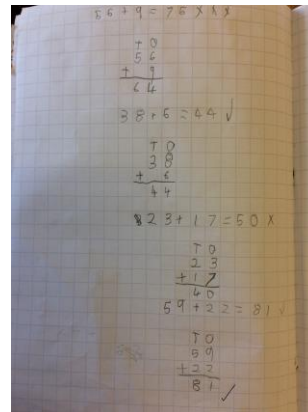

English

In English we have been animal experts, explaining where animals live and researching what things these animals eat, how they behave and any other interesting facts.

Maths

In maths we have challenged ourselves with using a new method to add two 2-digit numbers. Most of us are now really confident with this method and prefer it to other methods that we have learned. The children have really enjoyed 'being the teacher' and proving whether I have made mistakes or not.

Science

We have loved learning about life-cycles and have enjoyed watching our own tadpoles grow into frogs. We have been keeping a daily diary to show what changes have been happening.
