## Aims of Geography at St Mary's

What will our geographers, surveyors and town planners be able to do when they leave us?

Our geographers, surveyors and town planners will have been inspired by a curiosity and fascination about the world and its people. Children will be equipped with knowledge about diverse places, people, resources and natural and human environments, together with a deep understanding of the Earth's key physical and human processes.

They will use the correct geographical terms and vocabulary to communicate geographical ideas effectively. As children progress, their growing knowledge about the world will help them to deepen their understanding of the interaction between physical and human processes and of the formation and use of landscapes and environments. The children will understand how humans' impact and influence the physical geography of the world around us.

This will be taught through practical learning experiences which will enable them to put key geographical skills into place through field work, using maps both digitally and physically, and developing geographical skills using the community around them as we live by the river Arun and in the South Downs National Park.

## What a Geographer looks like at St Mary's by the end of Year Six

Children leaving St Mary's at the end of Key Stage 2 will know, do and remember the following:

- Geography is the study of how people and places interact.
- Where they live (locality, county, country and continent).
- The names and locations of the world's continents and oceans.
- The difference between physical and human geography including one notable example from each category and know the impact each of these can have on communities.
- The consequences of human actions on the environment and their responsibility as a citizen.
- The key differences between rural and urban areas and that some places are very different to others.
- Use a knowledge of direction and scale to interpret and construct maps and plans.
- Observe, collect data and analyse their findings through fieldwork.

## Statutory Framework for the Early Years Foundation Stage

The Early Years Geography curriculum has been developed to support and strengthen the children's understanding of the world. *The Statutory Framework for the Early Years Foundation Stage*<sup>1</sup> describes this as:

*Understanding the world involves guiding children to make sense of their physical world and their community. The frequency and range of children's personal experiences increases their knowledge and sense of the world around them – from visiting parks, libraries and museums to meeting important members of society such as police officers, nurses and firefighters. In addition, listening to a broad selection of stories, non-fiction, rhymes and poems will foster their understanding of our culturally, socially, technologically and ecologically diverse world. As well as building important knowledge, this extends their familiarity with words that support understanding across domains. Enriching and widening children's vocabulary will support later reading comprehension.*

### The Early Learning Goals for Understanding the World

The Early Learning Goals (ELGs) summarise the knowledge, skills and understanding that all young children should have gained by the end of the reception year.

#### Past and Present

- *Talk about the lives of the people around them and their roles in society.*
- *Know some similarities and differences between things in the past and now, drawing on their experiences and what has been read in class.*
- *Understand the past through settings, characters and events encountered in books read in class and storytelling.*

#### People, Culture and Communities

- *Describe their immediate environment using knowledge from observation, discussion, stories, non-fiction texts and maps.*
- *Know some similarities and differences between different religious and cultural communities in this country, drawing on their experiences and what has been read in class.*
- *Explain some similarities and differences between life in this country and life in other countries, drawing on knowledge from stories, non-fiction texts and when appropriate – maps.*

#### The Natural World

- *Explore the natural world around them, making observations and drawing pictures of animals and plants.*
- *Know some similarities and differences between the natural world around them and contrasting environments, drawing on their experiences and what has been read in class.*
- *Understand some important processes and changes in the natural world around them, including the seasons and changing states of matter.*

---

<sup>1</sup><https://www.gov.uk/government/publications/early-years-foundation-stage-framework--2>

The ELGs are based on typical child development at the age of five, so most children are likely to meet them. However, teachers use their professional knowledge of the child to decide whether each ELG description best fits the child's learning and development. The most accurate picture of the child's overall embedded learning will come from a holistic view of the descriptor.

The Early Years curriculum is not composed of the ELGs as this would limit the wide variety of rich experiences that are crucial to child development. At St Mary's, teachers are guided by *Development Matters*<sup>2</sup> and *Birth to 5 Matters*<sup>3</sup> as tools to further support curriculum and learning.

## National Curriculum Coverage: Key Stage 1

By the end of key stage 1, pupils should have developed knowledge about the world, the United Kingdom and their locality. They should understand basic subject-specific vocabulary relating to human and physical geography and begin to use geographical skills, including first-hand observation, to enhance their locational awareness.

During key stage 1, they should be taught to:

### Locational Knowledge

National Curriculum Objective	Coverage at St Mary's
Name and locate the world's seven continents and five oceans.	Y1/2 Cycle A – Spring 2 – Frozen Planet Y1/2 Cycle A – Summer 1 – Dinosaur Planet
Name, locate and identify characteristics of the four countries and capital cities of the United Kingdom and its surrounding seas	Y1/2 Cycle A - Autumn 2 – Bright Lights, Big City Y1/2 Cycle A – Summer 1 – Dinosaur Planet

### Place Knowledge

National Curriculum Objective	Coverage at St Mary's
Understand geographical similarities and differences through studying the human and physical geography of a small area of the United Kingdom, and of a small area in a contrasting non-European country.	Y1/2 Cycle A - Autumn 2 – Bright Lights, Big City Y1/2 Cycle A – Spring 2 – Frozen Planet

### Human and Physical Geography

National Curriculum Objective	Coverage at St Mary's
Identify seasonal and daily weather patterns in the United Kingdom and the location of hot and cold areas of the world in relation to the Equator and the North and South Poles.	Y1/2 Cycle A - Autumn 2 – Bright Lights, Big City Y1/2 Cycle A – Spring 2 – Frozen Planet
Use basic geographical vocabulary to refer to key physical features, including: beach, cliff, coast, forest, hill, mountain, sea, ocean, river, soil, valley, vegetation, season and weather.	Y1/2 Cycle A - Autumn 2 – Bright Lights, Big City
Use basic geographical vocabulary to refer to key human features, including: city, town, village, factory, farm, house, office, port, harbour and shop	Y1/2 Cycle A - Autumn 2 – Bright Lights, Big City

## Geographical Skills and Fieldwork

<b>National Curriculum Objective</b>	<b>Coverage at St Mary's</b>
Use world maps, atlases and globes to identify the United Kingdom and its countries, as well as the countries, continents and oceans studied at this key stage.	Y1/2 Cycle A - Autumn 2 – Bright Lights, Big City
Use simple compass directions (North, South, East and West) and locational and directional language [for example, near and far; left and right], to describe the location of features and routes on a map.	Y1/2 Cycle A - Autumn 2 – Bright Lights, Big City Y1/2 Cycle A – Spring 2 – Frozen Planet
Use aerial photographs and plan perspectives to recognise landmarks and basic human and physical features; devise a simple map; and use and construct basic symbols in a key.	Y1/2 Cycle A - Autumn 2 – Bright Lights, Big City
Use simple fieldwork and observational skills to study the geography of their school and its grounds and the key human and physical features of its surrounding environment.	Y1/2 Cycle A - Autumn 1 – Sensational Senses Y1/2 Cycle A - Autumn 2 – Bright Lights, Big City

## National Curriculum Coverage: Key Stage 2

During key stage 2, pupils should extend their knowledge and understanding beyond the local area to include the United Kingdom and Europe, North and South America. This will include the location and characteristics of a range of the world's most significant human and physical features. They should develop their use of geographical knowledge, understanding and skills to enhance their locational and place knowledge.

They should be taught to:

### Locational Knowledge

National Curriculum Objective	Coverage at St Mary's
Locate the world's countries, using maps to focus on Europe (including the location of Russia) and North and South America, concentrating on their environmental regions, key physical and human characteristics, countries, and major cities.	<b>Y3 – Spring 1 – Predators &amp; Prey</b> Y3 – Spring 2- Urban Pioneers Y3 – Summer 1 – Tremors Y4 – Autumn 1 – Rumble in the Jungle Y4 – Summer 1 – Rumbles Y5 – Spring 1 – Ancient Greeks Y6 – Autumn 1 – World at War Y6 – Autumn 2 – Frozen Kingdom Y6 – Spring 2 – Exploring Africa
Name and locate counties and cities of the United Kingdom, geographical regions and their identifying human and physical characteristics, key topographical features (including hills, mountains, coasts and rivers), and land-use patterns; and understand how some of these aspects have changed over time.	Y3 – Autumn 2 – Flow <b>Y3 – Spring 1 – Predators &amp; Prey</b> Y3 – Spring 2- Urban Pioneers Y3 – Summer 2 – Romans Y4 – Summer 2- Vikings
Identify the position and significance of latitude, longitude, Equator, Northern Hemisphere, Southern Hemisphere, the Tropics of Cancer and Capricorn, Arctic and Antarctic Circle, the Prime/Greenwich Meridian and time zones (including day and night).	Y3 – Autumn 2 – Flow Y4 – Autumn 2 – Road Trip USA Y5 – Autumn 1 – Space Y5 – Summer 1 – The Waves Y6 – Autumn 2 – Frozen Kingdom

### Place Knowledge

National Curriculum Objective	Coverage at St Mary's
Understand geographical similarities and differences through the study of human and physical geography of a region of the United Kingdom, a region in a European country, and a region within North or South America.	Y3 – Spring 2- Urban Pioneers <b>Y4 – Autumn 1 – Rumble in the Jungle</b> Y4 – Autumn 2 – Road Trip USA Y5 – Spring 1 – Ancient Greeks Y6 – Autumn 2 – Frozen Kingdom

## Human and Physical Geography

National Curriculum Objective	Coverage at St Mary's
Describe and understand key aspects of physical geography, including: climate zones, biomes and vegetation belts, rivers, mountains, volcanoes and earthquakes, and the water cycle.	Y3 – Autumn 2 – Flow Y3 – Summer 1 – Tremors Y4 – Autumn 1 – Rumble in the Jungle Y4 - Spring 2 – Misty Mountain, Winding River Y4 – Summer 1 – Rumbles Y6 – Autumn 2 – Frozen Kingdom Y6 – Spring 1 – Explorers & Adventurers
Describe and understand key aspects of human geography, including: types of settlement and land use, economic activity including trade links, and the distribution of natural resources including energy, food, minerals and water.	Y3 – Autumn 1 – Stone Age Y3 – Autumn 2 – Flow <b>Y3 – Spring 1 – Predators &amp; Prey</b> Y3 – Spring 2- Urban Pioneers Y4 – Autumn 1 – Rumble in the Jungle <b>Y4 – Spring 1 – Temples, Tombs &amp; Treasures</b> Y6 – Autumn 2 – Frozen Kingdom

## Geographical Skills and Fieldwork

National Curriculum Objective	Coverage at St Mary's
Use maps, atlases, globes and digital/computer mapping to locate countries and describe features studied.	Y3 – Autumn 2 – Flow Y3 – Spring 2- Urban Pioneers Y3 Summer 1 – Tremors Y4 – Autumn 1 – Rumble in the Jungle Y4 – Autumn 2 – Road Trip USA Y4 – Spring 1 – Temples, Tombs & Treasures Y4 – Summer 2- Vikings Y5 – Autumn 1 – Space Y5 – Autumn 2 – Princes, Peasants & Pestilence Y5 – Spring 2 – Off With Her Head Y5 – Summer 1 – The Waves Y6 – Autumn 2 – Frozen Kingdom Y6 – Spring 2 – Exploring Africa <b>Y6 – Summer 2 – All About Me</b>
Use the eight points of a compass, four and six-figure grid references, symbols and key (including the use of Ordnance Survey maps) to build their knowledge of the United Kingdom and the wider world.	Y3 – Spring 2- Urban Pioneers Y5 – Autumn 1 – Space <b>Y6 – Summer 2 – All About Me</b>
Use fieldwork to observe, measure, record and present the human and physical features in the local area using a range of methods, including sketch maps, plans and graphs, and digital technologies.	Y3 – Autumn 2 – Flow Y4 – Summer 2- Vikings Y5 – Autumn 2 – Princes, Peasants & Pestilence Y5 – Summer 1 – The Waves <b>Y6 – Summer 2 – All About Me</b>

## Progression of Disciplinary Knowledge at St Mary's

Year Group	Geographical Enquiry
Early Years	Teacher led enquiries, respond to simple questions.
Year 1	Teacher led enquiries, to ask and respond to simple questions. Use information books/pictures as sources of information. Investigate their surroundings. Make observations about where things are e.g. within school or local area.
Year 2	Children encouraged to ask simple geographical questions, Where is it? What's it like? Use NF books, stories, maps, pictures/photos and internet as sources of information. Investigate their surroundings Make appropriate observations about why things happen. Make simple comparisons between features of different places.
Year 3	Begin to ask/initiate geographical questions. Use NF books, stories, atlases, pictures/photos and internet as sources of information. Investigate places and themes at more than one scale. Begin to collect and record evidence. Analyse evidence and begin to draw conclusions e.g., make comparisons between two locations using photos/ pictures, temperatures in different locations.
Year 4	Ask and respond to questions and offer their own ideas. Extend to satellite images, aerial photographs. Investigate places and themes at more than one scale. Collect and record evidence with some aid. Analyse evidence and draw conclusions e.g. make comparisons between locations photos, pictures and maps.
Year 5	Begin to suggest questions for investigating. Begin to use primary and secondary sources of evidence in their investigations. Investigate places with more emphasis on the larger scale; contrasting and distant places Collect and record evidence unaided. Analyse evidence and draw conclusions e.g. compare historical maps of varying scales e.g. temperature of various locations - influence on people/everyday life.
Year 6	Suggest questions for investigating Use primary and secondary sources of evidence in their investigations. Investigate places with more emphasis on the larger scale; contrasting and distant places Collect and record evidence unaided Analyse evidence and draw conclusions e.g. from field work data on land use comparing land use/temperature, look at patterns and explain reasons behind it

Year Group	Direction and Location
Early Years	Begin to follow simple directions (Up, down, left/right, forwards/backwards).
Year 1	Follow directions confidently (Up, down, left/right, forwards/backwards).
Year 2	Follow directions (as yr 1 and inc'. NSEW).
Year 3	Use 4 compass points to follow/give directions. Use letter/no. co-ordinates to locate features on a map.
Year 4	Use 4 compass points well. Begin to use 8 compass points. Use letter/no. co-ordinates to locate features on a map confidently.
Year 5	Use 8 compass points. Begin to use 4 figure co-ordinates to locate features on a map.
Year 6	Use 8 compass points confidently and accurately. Use 4 figure co-ordinates confidently to locate features on a map. Begin to use 6 figure grid refs; use latitude and longitude on atlas maps.

<b>Year Group</b>	<b>Drawing Maps</b>
Early Years	Begin to draw maps in their play to represent places and journeys, real and imagined.
Year 1	Draw simple picture maps to represent places and journeys, real and imagined.
Year 2	Draw a map of a real place. (e.g., add detail to a sketch map from aerial photograph).
Year 3	Try to make a map of a short route experienced, with features in correct order. Try to make a simple scale drawing.
Year 4	Make a map of a short route experienced, with features in correct order. Make a simple scale drawing.
Year 5	Begin to draw a variety of thematic maps based on their own data.
Year 6	Draw a variety of thematic maps based on their own data. Begin to draw plans of increasing complexity.

<b>Year Group</b>	<b>Representations</b>
Early Years	N/A
Year 1	Use own symbols on imaginary map.
Year 2	Begin to understand the need for a key. Use class agreed symbols to make a simple key.
Year 3	Know why a key is needed. Use standard symbols.
Year 4	Know why a key is needed. Begin to recognise symbols on an OS map.
Year 5	Draw a sketch map using symbols and a key. Use/recognise OS map symbols.
Year 6	Use/recognise OS map symbols. Use atlas symbols.

<b>Year Group</b>	<b>Using Maps</b>
Early Years	Use a simple picture map to move around the school. Recognise that it is about a place.
Year 1	Use a simple map to move around the village.
Year 2	Use an infant atlas to locate places. Follow a route on a map. Use a plan view.
Year 3	Locate places on larger scale maps e.g. map of Europe. Follow a route on a map with some accuracy. (E.g. whilst orienteering).
Year 4	Locate places on large scale maps, (e.g. Find UK or India on globe). Follow a route on a large-scale map.
Year 5	Compare maps with aerial photographs. Select a map for a specific purpose (e.g. Pick atlas to find Greece, OS map to find local village). Begin to use atlases to find out about other features of places. (e.g. find wettest part of the world).
Year 6	Follow a short route on an OS map. Describe features shown on OS map. Locate places on a world map. Use atlases to find out about other features of places. (e.g. mountain regions, weather patterns)

<b>Year Group</b>	<b>Scale and Distance</b>
Early Years	N/A
Year 1	Draw around objects to make a plan.
Year 2	Look down on objects to make a plan view map.
Year 3	Begin to draw a sketch map from a high viewpoint.
Year 4	Draw a sketch map from a high viewpoint.
Year 5	Draw a plan view map with some accuracy.
Year 6	Draw a plan view map accurately.

<b>Year Group</b>	<b>Map Knowledge</b>
Early Years	Identify the United Kingdom on a world map or globe.
Year 1	Begin to name and locate some places within/around the UK (hometown, cities, countries e.g. Wales, France).
Year 2	Locate and name on UK map major features e.g. London, River Thames, home location, seas.
Year 3	Begin to identify points on maps A, B and C.
Year 4	Begin to identify significant places and environments.
Year 5	Identify significant places and environments.
Year 6	Confidently identify significant places and environments.

<b>Year Group</b>	<b>Style of Map</b>
Early Years	Picture maps and globes.
Year 1	Picture maps and globes.
Year 2	Find land/sea on globe. Use teacher drawn base maps. Use large scale OS maps. Use an infant atlas.
Year 3	Use large scale OS maps. Begin to use map sites on internet. Begin to use junior atlases. Begin to identify features on aerial/oblique photographs.
Year 4	Use large and medium scale OS maps. Use junior atlases. Use map sites on internet. Identify features on aerial/oblique photographs
Year 5	Use index and contents page within atlases. Use medium scale land ranger OS maps.
Year 6	Use OS maps. Confidently use an atlas. Recognise world map as a flattened globe

Year/Topic	N.C. Objectives	Prior Knowledge	Semantic Knowledge	Procedural Knowledge																																																										
<p>Year 1&amp;2 Cycle A Frozen Planet <u>Strands</u></p>	<p><b>Location Knowledge</b> Name and locate the world's 7 continents and 5 oceans</p> <p><b>Place Knowledge</b> Understand geographical similarities and differences through studying the human and physical geography of a small area of the United Kingdom, and the polar regions.</p> <p><b>Human and Physical Geography</b> Identify seasonal and daily weather patterns in the United Kingdom and the location of hot and cold areas of the world in relation to the Equator and the North and South Poles. Use basic geographical vocabulary to refer to key physical features, including beach, cliff, coast, forest, hill, mountain, sea, ocean, river, soil, valley, vegetation, season and weather.</p> <p><b>Geographical Skills &amp; Fieldwork</b> Use simple compass directions (North, South, East and West) and locational and directional language [for example, near and far; left and right] to describe the location of features and routes on a map.</p>	<p>The United Kingdom is in the continent of Europe.</p> <p>Our school is in Pulborough, West Sussex, England, The United Kingdom, Europe.</p> <p>Human features are man-made and include factories, farms, houses, offices, ports, harbours and shops.</p> <p>Physical features are naturally created features of the Earth. Use basic geographical vocabulary to identify and describe physical features, such as beach, cliff, coast, forest, hill, mountain, sea, ocean, river, soil, valley and vegetation.</p> <p>A map is a picture or drawing of an area of land or sea that can show human and physical features. A key is used to show features on a map. A map has symbols to show where things are located.</p> <p>An aerial photograph or plan perspective shows an area of land from above.</p> <p>Positional language includes behind, next to and in front of. Directional language includes left, right, straight ahead and turn.</p> <p>The four cardinal points on a compass are north, south, east and west. A route is a set of directions that can be used to get from one place to another.</p>	<p>A continent is a large area of land. The world's seven continents are Africa, Antarctica, Asia, Australia, Europe, North America and South America. The five oceans are the Arctic Ocean, Atlantic Ocean, Indian Ocean, Pacific Ocean and Southern Ocean.</p> <p>The Arctic is at the very top of the Earth. It includes the areas around the North Pole. It isn't a country or a continent. It is mostly a frozen ocean. The Arctic includes parts of lots of different countries.</p> <p>Antarctica is at the bottom of the Earth. It includes the areas around the South Pole. It is a continent because it is an area of land, covered in ice. There are no towns or cities in Antarctica as no one lives there all the time.</p> <p>Places can be compared by size, location, weather and climate.</p> <p>Colder regions of the world are mostly found around the Poles and warmer regions near the Equator.</p> <p>Antarctica is the coldest and windiest place on Earth.</p> <p>The Arctic only has two seasons. It has long, cold winters and short, cool summers.</p> <p>A physical feature is one that forms naturally and can change over time due to weather and other forces.</p> <p>Physical features of the Arctic include mountains, fjords, islands, plateaus, glaciers and icebergs.</p> <p>Physical features of the Antarctic include valleys, seas, mountains, glaciers and icebergs.</p> <p>Animals that live in the polar regions all have special adaptations (skills or features they have developed) which allow them to live in such cold temperatures.</p> <p>Arctic animals include arctic foxes, polar bears, walrus and reindeer.</p> <p>Antarctic animals include penguins, orcas, seals and dolphins.</p> <p>Our world has been getting hotter due to things humans are doing, like the way we make energy, farm and cut down trees.</p> <p>The polar ice caps are melting because of climate change which means it is harder for the animals who live in these regions to survive.</p>	<table border="1"> <thead> <tr> <th colspan="2" data-bbox="1724 448 2210 483">Vocabulary</th> </tr> </thead> <tbody> <tr> <td data-bbox="1724 483 1937 518">continent</td> <td data-bbox="1937 483 2210 518">climate</td> </tr> <tr> <td data-bbox="1724 518 1937 553">country</td> <td data-bbox="1937 518 2210 553">region</td> </tr> <tr> <td data-bbox="1724 553 1937 588">ocean</td> <td data-bbox="1937 553 2210 588">polar</td> </tr> <tr> <td data-bbox="1724 588 1937 624">sea</td> <td data-bbox="1937 588 2210 624">north pole</td> </tr> <tr> <td data-bbox="1724 624 1937 659">Africa</td> <td data-bbox="1937 624 2210 659">south pole</td> </tr> <tr> <td data-bbox="1724 659 1937 694">Antarctica</td> <td data-bbox="1937 659 2210 694">equator</td> </tr> <tr> <td data-bbox="1724 694 1937 729">Asia</td> <td data-bbox="1937 694 2210 729">season</td> </tr> <tr> <td data-bbox="1724 729 1937 764">Australia</td> <td data-bbox="1937 729 2210 764">winter</td> </tr> <tr> <td data-bbox="1724 764 1937 799">Europe</td> <td data-bbox="1937 764 2210 799">summer</td> </tr> <tr> <td data-bbox="1724 799 1937 834">North America</td> <td data-bbox="1937 799 2210 834">spring</td> </tr> <tr> <td data-bbox="1724 834 1937 869">South America</td> <td data-bbox="1937 834 2210 869">autumn</td> </tr> <tr> <td data-bbox="1724 869 1937 904">Arctic Ocean</td> <td data-bbox="1937 869 2210 904">physical feature</td> </tr> <tr> <td data-bbox="1724 904 1937 940">Atlantic Ocean</td> <td data-bbox="1937 904 2210 940">mountain</td> </tr> <tr> <td data-bbox="1724 940 1937 975">Indian Ocean</td> <td data-bbox="1937 940 2210 975">fjord</td> </tr> <tr> <td data-bbox="1724 975 1937 1010">Pacific Ocean</td> <td data-bbox="1937 975 2210 1010">island</td> </tr> <tr> <td data-bbox="1724 1010 1937 1045">Southern Ocean</td> <td data-bbox="1937 1010 2210 1045">plateau</td> </tr> <tr> <td data-bbox="1724 1045 1937 1080">Earth</td> <td data-bbox="1937 1045 2210 1080">glacier</td> </tr> <tr> <td data-bbox="1724 1080 1937 1115">North Pole</td> <td data-bbox="1937 1080 2210 1115">iceberg</td> </tr> <tr> <td data-bbox="1724 1115 1937 1150">frozen</td> <td data-bbox="1937 1115 2210 1150">valley</td> </tr> <tr> <td data-bbox="1724 1150 1937 1185">ice</td> <td data-bbox="1937 1150 2210 1185">adaptation</td> </tr> <tr> <td data-bbox="1724 1185 1937 1220">top</td> <td data-bbox="1937 1185 2210 1220">climate change</td> </tr> <tr> <td data-bbox="1724 1220 1937 1256">bottom</td> <td data-bbox="1937 1220 2210 1256">survive</td> </tr> <tr> <td data-bbox="1724 1256 1937 1291">town</td> <td></td> </tr> <tr> <td data-bbox="1724 1291 1937 1326">city</td> <td></td> </tr> <tr> <td data-bbox="1724 1326 1937 1361">compare</td> <td></td> </tr> <tr> <td data-bbox="1724 1361 1937 1396">size</td> <td></td> </tr> <tr> <td data-bbox="1724 1396 1937 1431">location</td> <td></td> </tr> <tr> <td data-bbox="1724 1431 1937 1466">weather</td> <td></td> </tr> </tbody> </table>	Vocabulary		continent	climate	country	region	ocean	polar	sea	north pole	Africa	south pole	Antarctica	equator	Asia	season	Australia	winter	Europe	summer	North America	spring	South America	autumn	Arctic Ocean	physical feature	Atlantic Ocean	mountain	Indian Ocean	fjord	Pacific Ocean	island	Southern Ocean	plateau	Earth	glacier	North Pole	iceberg	frozen	valley	ice	adaptation	top	climate change	bottom	survive	town		city		compare		size		location		weather

Year and Topic	N.C. Objectives	Prior Knowledge	Semantic Knowledge	Procedural Knowledge
<p>Year 1&amp;2 Cycle B</p> <p>Our Wonderful World</p> <p><u>Strands</u></p>	<p><b>Location Knowledge</b> Locate the world’s countries using maps of South America, concentrating on their: Environmental regions: rainforest weather and weather forecast. Key physical and human characteristics: the life of a child in the rainforest, rainforest animals and rainforest layers.</p> <p><b>Place Knowledge</b> Understand geographical similarities and differences through the study of human and physical geography of a region of South America.</p> <p><b>Human and Physical Geography</b> Describe and understand key aspects of human geography, including types of settlement and land use, economic activity including trade links, the distribution of natural resources including energy, food, minerals and water. Describe and understand key aspects of physical geography, including climate zones, biomes and vegetation belts and rivers.</p> <p><b>Geographical Skills &amp; Fieldwork</b> Use maps, atlases, globes and digital/computer mapping to locate countries and describe features studied.</p>	<p>The United Kingdom (UK) is a union of four countries: England, Northern Ireland, Scotland and Wales. The capital of England is London.</p> <p>Our school is in Pulborough, West Sussex, England, The United Kingdom.</p>	<p>A continent is a large area of land. The world's seven continents are Africa, Antarctica, Asia, Australia, Europe, North America and South America. The five oceans are the Arctic Ocean, Atlantic Ocean, Indian Ocean, Pacific Ocean and Southern Ocean.</p> <p>A non-European country is a country outside the continent of Europe. For example, the USA, Australia, China and Egypt are non-European countries. European countries include the United Kingdom, Germany, France and Spain. Describe and compare the human and physical similarities and differences between an area of the UK and a contrasting non-European country.</p> <p>Warmer areas of the world are closer to the equator and colder areas of the world are further from the equator. The equator is an imaginary line that divides the Earth into two parts: the Northern and Southern Hemispheres. Continents have different climates depending on where they are in the world. The climate of a place can be identified by the types of weather, plants and animals found there.</p> <p>A map is a picture or drawing of an area of land or sea that can show human and physical features. A key is used to show features on a map. A map has symbols to show where things are located.</p> <p>Places can be compared by size, amenities, transport, location, weather and climate. Warmer areas of the world are closer to the equator and colder areas of the world are further from the equator. The equator is an imaginary line that divides the Earth into two parts: the Northern and Southern Hemispheres.</p> <p>Continents have different climates depending on where they are in the world. The climate of a place can be identified by the types of weather, plants and animals found there.</p> <p>Human features are man-made and include factories, farms, houses, offices, ports, harbours and shops.</p> <p>Physical features are naturally created features of the Earth. Use basic geographical vocabulary to identify and describe physical features, such as beach, cliff, coast, forest, hill, mountain, sea, ocean, river, soil, valley and vegetation.</p> <p>A settlement is a place where people live and work and can be big or small, depending on how many people live there. Towns and cities are urban settlements. Features of towns and cities include homes, shops, roads and offices.</p> <p>Fieldwork includes going out in the environment to look, ask questions, take photographs, take measurements and collect samples.</p> <p>Data is information that can be collected and used to answer a geographical question.</p>	<p style="text-align: center;"><b>Vocabulary</b></p>

Year and Topic	N.C. Objectives	Prior Knowledge	Semantic Knowledge	Procedural Knowledge
<p>Year 1&amp;2 Cycle B Land Ahoy <u>Strands</u></p>	<p><b>Location Knowledge</b> Name and locate the world’s seven continents and five oceans.</p> <p>Name, locate and identify characteristics of the four countries and capital cities of the UK and its surrounding seas.</p> <p><b>Human and Physical Geography</b> Identify seasonal and daily weather patterns in the UK and the location of hot (Hawaii, Australia, New Zealand, Tahiti) and cold areas of the world in relation to the Equator and the North and South Poles.</p> <p><b>Geographical Skills &amp; Fieldwork</b> Use simple fieldwork and observational skills to study the geography of their school and its grounds and the key human and physical features of its surrounding environment.</p> <p>Use world maps, atlases and globes to identify the UK and its countries, as well as the countries, continents and oceans studied at this key stage.</p> <p>Use aerial photographs and plan perspectives to recognise landmarks and basic human and physical features; devise a simple map; and use and construct basic symbols in a key.</p>	<p>A continent is a large area of land. The world's seven continents are Africa, Antarctica, Asia, Australia, Europe, North America and South America. The five oceans are the Arctic Ocean, Atlantic Ocean, Indian Ocean, Pacific Ocean and Southern Ocean.</p> <p>A map is a picture or drawing of an area of land or sea that can show human and physical features. A key is used to show features on a map. A map has symbols to show where things are located.</p> <p>An aerial photograph or plan perspective shows an area of land from above.</p> <p>Warmer areas of the world are closer to the equator and colder areas of the world are further from the equator. The equator is an imaginary line that divides the Earth into two parts: the Northern and Southern Hemispheres. Continents have different climates depending on where they are in the world. The climate of a place can be identified by the types of weather, plants and animals found there.</p> <p>Physical features are naturally created features of the Earth. Use basic geographical vocabulary to identify and describe physical features, such as beach, cliff, coast, forest, hill, mountain, sea, ocean, river, soil, valley and vegetation</p>	<p>An ocean is a large sea. There are five oceans on our planet called the Arctic, Atlantic, Indian, Pacific and Southern Oceans. Seas include the Black, Red and Caspian Seas. The United Kingdom is an island surrounded by the Atlantic Ocean, English Channel, Irish Sea and North Sea. The world's seven continents are Africa, Antarctica, Asia, Australia, Europe, North America and South America.</p> <p>The equator is an imaginary line that divides the world into the Northern and Southern Hemispheres. The North Pole is the most northern point on Earth. The South Pole is the most southern point on Earth.</p> <p>A map is a picture or drawing of an area of land or sea that can show human and physical features. Maps use symbols and a key. A key is the information needed to read a map and a symbol is a picture or icon used to show a geographical feature.</p> <p>The characteristics of countries include their size, landscape, capital city, language, currency and key landmarks. England is the biggest country in the United Kingdom.</p> <p>A significant place is a location that is important to a community or society. Places can also be significant because of religious or historic events that may have happened in the past near the location. Significant places can also include monuments, such as the Eiffel Tower, or natural landscapes, such as the Great Barrier Reef.</p> <p>A physical feature is one that forms naturally, and can change over time due to weather and other forces. An aerial photograph or plan perspective shows an area of land from above.</p> <p>Positional language includes behind, next to and in front of. Directional language includes left, right, straight ahead and turn.</p> <p>The four cardinal points on a compass are north, south, east and west. A route is a set of directions that can be used to get from one place to another.</p> <p>An aerial photograph or plan perspective shows an area of land from above.</p> <p>An aerial photograph can be vertical (an image taken directly from above) or oblique (an image taken from above and to the side).</p>	<p style="text-align: center;"><b>Vocabulary</b></p>

Year/Topic	N.C. Objectives	Prior Knowledge	Semantic Knowledge	Procedural Knowledge																																																																														
<p>Year 3</p> <p>Flow</p> <p><u>Strands</u></p>	<p><b>Location Knowledge</b> Identify the position of latitude, longitude, Equator, Northern Hemisphere, Southern Hemisphere, the Tropics of Cancer and Capricorn, Arctic and Antarctic Circle, the Prime/Greenwich Meridian.</p> <p><b>Human and Physical Geography</b> Describe and understand key aspects of physical geography (<i>rivers</i>).  Describe and understand key aspects of human geography (<i>how rivers are used</i>).</p> <p><b>Geographical Skills &amp; Fieldwork</b> Use maps, atlases, globes and digital/computer mapping to locate countries and describe features studied.</p> <p>Use fieldwork to observe, measure, record and present the human and physical features in the local area using a range of methods, including sketch maps, plans and graphs, and digital technologies.</p>	<p>The River Arun runs through Pulborough.</p> <p>The River Thames runs through London.</p>	<p>Geographical features created by nature are called physical features. Physical features include beaches, cliffs and mountains.</p> <p>A river is a body of water that flows downhill, usually to the sea. The place where a river starts is called the source. Tributaries are small rivers or streams that flow into larger rivers or lakes. Meanders are bends in rivers. The place where a river flows into the sea is called the mouth.</p> <p>Rivers, and the landscape that surrounds them, have different characteristics. The upper course of a river is typically steep, narrow and rocky. The water is fast-flowing and turbulent. The middle course of a river is wider, deeper and curves in meanders. The water flows more slowly. The lower course of a river is flat and wide. The water runs into estuaries or creates deltas.</p> <p>Significant rivers of the UK include the Thames, Severn, Trent, Dee, Tyne, Ouse and Lagan.</p> <p>Other significant rivers include the Mississippi, Nile, Thames, Amazon, Volga, Zambezi, Mekong, Ganges, Danube and Yangtze.</p> <p>Erosion involves the wearing down of rock and soil found along the riverbed and banks. Erosion also involves the breaking down of the rock particles being carried downstream by the river. Transportation is the movement of materials in rivers as they flow downstream. Deposition occurs when a river loses energy and material being carried is dropped or deposited.</p> <p>Flooding can happen for a wide variety of natural and human reasons including excessive rainfall, lack of river dredging, land use and the topography of the land. Flooding can cause a wide range of problems including damaging property and equipment, contaminating farmland and cutting people off from vital services and supplies of food and water.</p> <p>Land uses include agricultural, recreational, housing and industry. Water systems are used for transport, industry, leisure and power.</p> <p>People have built settlements near rivers for thousands of years because rivers provide all the basic needs for life.</p> <p>Maps, globes and digital mapping tools can help to locate and describe significant geographical features.</p> <p>Latitude is the distance north or south of the equator and longitude is the distance east or west of the Prime Meridian.</p> <p>Water cannot be made. It is constantly recycled through a process called the water cycle.</p>	<p>Use NF books, stories, atlases, pictures/photos and internet as sources of information.</p> <p>Begin to collect and record evidence.</p> <p>Locate places on larger scale maps e.g., map of Europe.</p> <p>Follow a route on a map with some accuracy.</p> <p>Begin to identify points on maps A, B and C.</p> <p>Begin to use map sites on internet.</p> <p>Begin to use junior atlases.</p> <p>Begin to identify features on aerial/oblique photographs.</p> <table border="1" data-bbox="1742 647 2204 1453"> <thead> <tr> <th colspan="3" data-bbox="1742 647 2204 683">Vocabulary</th> </tr> </thead> <tbody> <tr> <td data-bbox="1742 683 1792 711">river</td> <td data-bbox="1792 683 1971 711"></td> <td data-bbox="1971 683 2204 711">soft rock</td> </tr> <tr> <td data-bbox="1742 711 1792 740">source</td> <td data-bbox="1792 711 1971 740"></td> <td data-bbox="1971 711 2204 740">hard rock</td> </tr> <tr> <td data-bbox="1742 740 1792 769">tributary</td> <td data-bbox="1792 740 1971 769"></td> <td data-bbox="1971 740 2204 769">leisure</td> </tr> <tr> <td data-bbox="1742 769 1792 798">channel</td> <td data-bbox="1792 769 1971 798"></td> <td data-bbox="1971 769 2204 798">housing</td> </tr> <tr> <td data-bbox="1742 798 1792 826">floodplain</td> <td data-bbox="1792 798 1971 826"></td> <td data-bbox="1971 798 2204 826">industry</td> </tr> <tr> <td data-bbox="1742 826 1792 855">riverbank</td> <td data-bbox="1792 826 1971 855"></td> <td data-bbox="1971 826 2204 855">transport</td> </tr> <tr> <td data-bbox="1742 855 1792 884">mouth</td> <td data-bbox="1792 855 1971 884"></td> <td data-bbox="1971 855 2204 884">agriculture</td> </tr> <tr> <td data-bbox="1742 884 1792 912">meander</td> <td data-bbox="1792 884 1971 912"></td> <td data-bbox="1971 884 2204 912">settlement</td> </tr> <tr> <td data-bbox="1742 912 1792 941">oxbow lake</td> <td data-bbox="1792 912 1971 941"></td> <td data-bbox="1971 912 2204 941">needs</td> </tr> <tr> <td data-bbox="1742 941 1792 970">waterfall</td> <td data-bbox="1792 941 1971 970"></td> <td data-bbox="1971 941 2204 970">disadvantage</td> </tr> <tr> <td data-bbox="1742 970 1792 999">v shaped valley</td> <td data-bbox="1792 970 1971 999"></td> <td data-bbox="1971 970 2204 999">map</td> </tr> <tr> <td data-bbox="1742 999 1792 1027">interlocking spurs</td> <td data-bbox="1792 999 1971 1027"></td> <td data-bbox="1971 999 2204 1027">atlas</td> </tr> <tr> <td data-bbox="1742 1027 1792 1056">aquatic</td> <td data-bbox="1792 1027 1971 1056"></td> <td data-bbox="1971 1027 2204 1056">primary data</td> </tr> <tr> <td data-bbox="1742 1056 1792 1085">collection</td> <td data-bbox="1792 1056 1971 1085"></td> <td data-bbox="1971 1056 2204 1085">observation</td> </tr> <tr> <td data-bbox="1742 1085 1792 1114">condensation</td> <td data-bbox="1792 1085 1971 1114"></td> <td data-bbox="1971 1085 2204 1114">latitude</td> </tr> <tr> <td data-bbox="1742 1114 1792 1142">current</td> <td data-bbox="1792 1114 1971 1142"></td> <td data-bbox="1971 1114 2204 1142">longitude</td> </tr> <tr> <td data-bbox="1742 1142 1792 1171">degrade</td> <td data-bbox="1792 1142 1971 1171"></td> <td data-bbox="1971 1142 2204 1171">equator</td> </tr> <tr> <td data-bbox="1742 1171 1792 1200">erosion</td> <td data-bbox="1792 1171 1971 1200">evaporation</td> <td data-bbox="1971 1171 2204 1200">Arun</td> </tr> <tr> <td data-bbox="1742 1200 1792 1228">fertile</td> <td data-bbox="1792 1200 1971 1228"></td> <td data-bbox="1971 1200 2204 1228">Thames</td> </tr> <tr> <td data-bbox="1742 1228 1792 1257">flood</td> <td data-bbox="1792 1228 1971 1257">nutrient</td> <td data-bbox="1971 1228 2204 1257">Nile</td> </tr> <tr> <td data-bbox="1742 1257 1792 1286">pollution</td> <td data-bbox="1792 1257 1971 1286"></td> <td data-bbox="1971 1257 2204 1286">Amazon</td> </tr> <tr> <td data-bbox="1742 1286 1792 1315">precipitation</td> <td data-bbox="1792 1286 1971 1315"></td> <td data-bbox="1971 1286 2204 1315">Yangtze</td> </tr> <tr> <td data-bbox="1742 1315 1792 1343">sediment</td> <td data-bbox="1792 1315 1971 1343"></td> <td data-bbox="1971 1315 2204 1343">Mississippi</td> </tr> <tr> <td data-bbox="1742 1343 1792 1372">silt</td> <td data-bbox="1792 1343 1971 1372"></td> <td data-bbox="1971 1343 2204 1372">Volga</td> </tr> <tr> <td data-bbox="1742 1372 1792 1401"></td> <td data-bbox="1792 1372 1971 1401"></td> <td data-bbox="1971 1372 2204 1401">Ganges</td> </tr> </tbody> </table>	Vocabulary			river		soft rock	source		hard rock	tributary		leisure	channel		housing	floodplain		industry	riverbank		transport	mouth		agriculture	meander		settlement	oxbow lake		needs	waterfall		disadvantage	v shaped valley		map	interlocking spurs		atlas	aquatic		primary data	collection		observation	condensation		latitude	current		longitude	degrade		equator	erosion	evaporation	Arun	fertile		Thames	flood	nutrient	Nile	pollution		Amazon	precipitation		Yangtze	sediment		Mississippi	silt		Volga			Ganges

Year and Topic	N.C. Objectives	Prior Knowledge	Semantic Knowledge	Procedural Knowledge																																																		
<p>Year 3 Tremors</p> <p><u>Strands</u></p>	<p><b>Location Knowledge</b> Locate the world’s countries, using maps to focus on Europe and North and South America, concentrating on their environmental regions, key physical and human characteristics, countries, and major cities.</p> <p><b>Human and Physical Geography</b> Describe and understand key aspects of physical geography (<i>volcanoes</i>).</p> <p><b>Geographical Skills &amp; Fieldwork</b> Use maps, atlases, globes and digital/computer mapping to locate countries and describe features studied. Collect, analyse and communicate a range of data.</p>	<p>Geographical features created by nature are called physical features. Physical features include beaches, cliffs and mountains.</p> <p>Maps, globes and digital mapping tools can help to locate and describe significant geographical features.</p> <p>The term geographical evidence relates to facts, information and numerical data.</p>	<p>Tectonic plates are pieces of the rocky outer layer of the Earth known as the crust.</p> <p>A volcano is an opening in the Earth’s surface from which gas, hot magma and ash can escape. They are usually found at meeting points of the Earth’s tectonic plates. When a volcano erupts, liquid magma collects in an underground magma chamber. The magma pushes through a crack called a vent and bursts out onto the Earth’s surface. Lava, hot ash and mudslides from volcanic eruptions can cause severe damage.</p> <p>Significant geographical activity includes earthquakes and volcanic eruptions. These are known as natural disasters because they are created by nature, affect many people and cause widespread damage.</p> <p>Volcanic eruptions and earthquakes happen when two tectonic plates push into each other, pull apart from one another or slide alongside each other. The centre of an earthquake is called the epicentre.</p> <p>When volcanoes erupt, they emit gases, lava and ash. Volcanic eruptions can destroy habitats, homes and businesses and can change the landscape.</p> <p>Significant volcanoes include Mount Vesuvius in Italy, Laki in Iceland and Krakatoa in Indonesia. Significant earthquake-prone areas include the San Andreas Fault in North America and the Ring of Fire, which runs around the edge of the Pacific Ocean and is where many plate boundaries in the Earth’s crust converge. Over three-quarters of the world’s earthquakes and volcanic eruptions happen along the Ring of Fire.</p> <p>The ring of fire runs around the edge of the Pacific Ocean and is made up of fault lines in the Earth’s crust. Most of the world’s earthquakes and volcanic eruptions happen along here.</p>	<p>Begin to ask/initiate geographical questions.</p> <p>Use NF books, stories, atlases, pictures/photos and internet as sources of information.</p> <p>Locate places on larger scale maps e.g. map of Europe.</p> <p>Use letter/no. co-ordinates to locate features on a map.</p> <p>Begin to identify points on maps A, B and C.</p> <table border="1" data-bbox="1684 518 2213 1348"> <thead> <tr> <th colspan="2" data-bbox="1684 518 2213 558">Vocabulary</th> </tr> </thead> <tbody> <tr> <td data-bbox="1684 558 1971 598">Physical feature</td> <td data-bbox="1971 558 2213 598">volcanologist</td> </tr> <tr> <td data-bbox="1684 598 1971 630">volcano</td> <td data-bbox="1971 598 2213 630">Mount Vesuvius</td> </tr> <tr> <td data-bbox="1684 630 1971 662">effusive eruption</td> <td data-bbox="1971 630 2213 662">Pompeii</td> </tr> <tr> <td data-bbox="1684 662 1971 694">explosive eruption</td> <td data-bbox="1971 662 2213 694">Laki</td> </tr> <tr> <td data-bbox="1684 694 1971 726">volcanic eruption</td> <td data-bbox="1971 694 2213 726">Krakatoa</td> </tr> <tr> <td data-bbox="1684 726 1971 758">lava</td> <td data-bbox="1971 726 2213 758">San Andreas Fault</td> </tr> <tr> <td data-bbox="1684 758 1971 790">ash</td> <td data-bbox="1971 758 2213 790">Ring of Fire</td> </tr> <tr> <td data-bbox="1684 790 1971 821">gas</td> <td data-bbox="1971 790 2213 821">active</td> </tr> <tr> <td data-bbox="1684 821 1971 853">pyroclastic flow</td> <td data-bbox="1971 821 2213 853">ash cloud</td> </tr> <tr> <td data-bbox="1684 853 1971 885">mudslide</td> <td data-bbox="1971 853 2213 885">conduit</td> </tr> <tr> <td data-bbox="1684 885 1971 917">magma</td> <td data-bbox="1971 885 2213 917">crater</td> </tr> <tr> <td data-bbox="1684 917 1971 949">magma chamber</td> <td data-bbox="1971 917 2213 949">dormant</td> </tr> <tr> <td data-bbox="1684 949 1971 981">explode</td> <td data-bbox="1971 949 2213 981">Herculaneum</td> </tr> <tr> <td data-bbox="1684 981 1971 1013">geologist</td> <td data-bbox="1971 981 2213 1013">layers of rock</td> </tr> <tr> <td data-bbox="1684 1013 1971 1045">igneous</td> <td data-bbox="1971 1013 2213 1045">main vent</td> </tr> <tr> <td data-bbox="1684 1045 1971 1077">metamorphic</td> <td data-bbox="1971 1045 2213 1077">molten rock</td> </tr> <tr> <td data-bbox="1684 1077 1971 1109">natural disaster</td> <td data-bbox="1971 1077 2213 1109">mountain</td> </tr> <tr> <td data-bbox="1684 1109 1971 1141">widespread</td> <td data-bbox="1971 1109 2213 1141">secondary vent</td> </tr> <tr> <td data-bbox="1684 1141 1971 1173">severe</td> <td data-bbox="1971 1141 2213 1173">sill volcanic bombs</td> </tr> <tr> <td data-bbox="1684 1173 1971 1204">tectonic plates</td> <td></td> </tr> <tr> <td data-bbox="1684 1204 1971 1236">volcanic eruption</td> <td></td> </tr> <tr> <td data-bbox="1684 1236 1971 1268">Plate boundaries</td> <td></td> </tr> <tr> <td data-bbox="1684 1268 1971 1300">crust</td> <td></td> </tr> <tr> <td data-bbox="1684 1300 1971 1332">crack</td> <td></td> </tr> </tbody> </table>	Vocabulary		Physical feature	volcanologist	volcano	Mount Vesuvius	effusive eruption	Pompeii	explosive eruption	Laki	volcanic eruption	Krakatoa	lava	San Andreas Fault	ash	Ring of Fire	gas	active	pyroclastic flow	ash cloud	mudslide	conduit	magma	crater	magma chamber	dormant	explode	Herculaneum	geologist	layers of rock	igneous	main vent	metamorphic	molten rock	natural disaster	mountain	widespread	secondary vent	severe	sill volcanic bombs	tectonic plates		volcanic eruption		Plate boundaries		crust		crack

<p style="text-align: center;">Year 4</p> <p style="text-align: center;">Misty Mountain, Winding River Strands</p>	<p><b>Location Knowledge</b> Name and locate counties and cities of the United Kingdom, geographical regions and their identifying human and physical characteristics, key topographical features and land-use patterns; and understand how some of these aspects have changed over time. Locate the world's countries, using maps, concentrating on their environmental regions, key physical and human characteristics, countries, and major cities.</p> <p><b>Human and Physical Geography</b> Describe and understand key aspects of physical geography, including <i>mountains and recap of rivers</i>.</p> <p><b>Geographical Skills &amp; Fieldwork</b> Use maps, atlases, globes and digital/computer mapping to locate countries and describe features studied.</p>	<p>Geographical features created by nature are called physical features. Physical features include beaches, cliffs and mountains</p> <p>Maps, globes and digital mapping tools can help to locate and describe significant geographical features.</p> <p>A river is a body of water that flows downhill, usually to the sea. The place where a river starts is called the source. Tributaries are small rivers or streams that flow into larger rivers or lakes. Meanders are bends in rivers. The place where a river flows into the sea is called the mouth.</p> <p>Significant rivers of the UK include the Thames, Severn, Trent, Dee, Tyne, Ouse and Lagan.</p> <p>The River Arun runs through Pulborough.</p> <p>Primary data includes information gathered by observation and investigation.</p> <p><b>See progression grid for Flow for more details of coverage.</b></p>	<p>A physical feature is one that forms naturally and can change over time due to physical processes, such as erosion and weathering. Physical features include rivers, forests, hills, mountains and cliffs. An aspect of a physical feature might be the type of mountain, such as dome or volcanic, or the type of forest, such as coniferous or broad-leaved.</p> <p>A mountain is a natural elevation of the Earth's surface, rising to a summit. Mountains have an elevation greater than that of a hill, usually greater than 610m.</p> <p>Significant mountains and mountain ranges include Ben Nevis, Snowdon, Helvellyn, Pen y Fan, the Scottish Highlands and the Pennines.</p> <p>There are four mountain ranges in the UK that are home to each country's highest mountain: Ben Nevis, in the Grampian Mountains, Scotland; Scafell Pike, in the Cumbrian Mountains, England; Snowdon, in the Snowdonia Mountains, Wales; and Slieve Donard, in the Mourne Mountains, Northern Ireland.</p> <p>Altitudinal zonation describes the different climates and types of wildlife at different altitudes on mountains. Examples include forests that grow at low altitudes and support a wide variety of plants and animals, tundra that is found at higher altitudes and supports plants and animals that are adapted to harsher environments, and the summits of mountains, which are usually covered in ice and snow and don't support any life.</p> <p>Topography is the arrangement of the natural and artificial physical features of an area.</p> <p>A contour line is a line on a map that joins areas of equal height and shows the elevation of features in the landscape.</p> <p>Mountains form over millions of years. They are made when the Earth's tectonic plates push together or move apart. Mountains are also formed when magma underneath the Earth's crust pushes large areas of land upwards. There are five types of mountain: fold, fault-block, volcanic, dome and plateau.</p> <p>Secondary data includes information gathered by geographical reports, surveys, maps, research, books and the internet.</p> <p>An atlas is a collection of maps and information that shows geographical features, topography, boundaries, climatic, social and economic statistics of an area.</p>	<p>Use letter/no. co-ordinates to locate features on a map confidently.</p> <p>Begin to identify significant places and environments.</p> <p>Use junior atlases.</p> <p>Use map sites on internet.</p> <p>Identify features on aerial/oblique photographs.</p> <p>Locate places on large scale maps, (e.g globe).</p> <table border="1" data-bbox="1686 416 2204 1449"> <thead> <tr> <th colspan="2" data-bbox="1686 416 2204 451">Vocabulary</th> </tr> </thead> <tbody> <tr> <td data-bbox="1686 451 1951 486">physical feature</td> <td data-bbox="1951 451 2204 486">tectonic plate</td> </tr> <tr> <td data-bbox="1686 486 1951 521">mountain</td> <td data-bbox="1951 486 2204 521">magma</td> </tr> <tr> <td data-bbox="1686 521 1951 557">mountain range</td> <td data-bbox="1951 521 2204 557">weathering</td> </tr> <tr> <td data-bbox="1686 557 1951 592">hill</td> <td data-bbox="1951 557 2204 592">fold mountain</td> </tr> <tr> <td data-bbox="1686 592 1951 627">elevation</td> <td data-bbox="1951 592 2204 627">volcanic mountain</td> </tr> <tr> <td data-bbox="1686 627 1951 662">summit</td> <td data-bbox="1951 627 2204 662">fault-block</td> </tr> <tr> <td data-bbox="1686 662 1951 697">significant</td> <td data-bbox="1951 662 2204 697">mountains dome</td> </tr> <tr> <td data-bbox="1686 697 1951 732">Ben Nevis</td> <td data-bbox="1951 697 2204 732">mountains</td> </tr> <tr> <td data-bbox="1686 732 1951 767">Grampian Mountains</td> <td data-bbox="1951 732 2204 767">contour lines</td> </tr> <tr> <td data-bbox="1686 767 1951 802">Snowdon</td> <td data-bbox="1951 767 2204 802">secondary</td> </tr> <tr> <td data-bbox="1686 802 1951 837">Helvellyn</td> <td data-bbox="1951 802 2204 837">data</td> </tr> <tr> <td data-bbox="1686 837 1951 873">Pn y Fan</td> <td data-bbox="1951 837 2204 873">atlas</td> </tr> <tr> <td data-bbox="1686 873 1951 908">Scottish Highlands</td> <td data-bbox="1951 873 2204 908">erosion</td> </tr> <tr> <td data-bbox="1686 908 1951 943">Pennines</td> <td></td> </tr> <tr> <td data-bbox="1686 943 1951 978">Scafell Pike</td> <td></td> </tr> <tr> <td data-bbox="1686 978 1951 1013">Cambrian Mountains</td> <td></td> </tr> <tr> <td data-bbox="1686 1013 1951 1048">Snowden</td> <td></td> </tr> <tr> <td data-bbox="1686 1048 1951 1083">Slieve Donard</td> <td></td> </tr> <tr> <td data-bbox="1686 1083 1951 1118">Mourne Mountains</td> <td></td> </tr> <tr> <td data-bbox="1686 1118 1951 1153">altitude</td> <td></td> </tr> <tr> <td data-bbox="1686 1153 1951 1189">altitudinal zone</td> <td></td> </tr> <tr> <td data-bbox="1686 1189 1951 1224">climate</td> <td></td> </tr> <tr> <td data-bbox="1686 1224 1951 1259">wildlife</td> <td></td> </tr> <tr> <td data-bbox="1686 1259 1951 1294">forest</td> <td></td> </tr> <tr> <td data-bbox="1686 1294 1951 1329">tundra</td> <td></td> </tr> <tr> <td data-bbox="1686 1329 1951 1364">environment</td> <td></td> </tr> <tr> <td data-bbox="1686 1364 1951 1399">adaption</td> <td></td> </tr> <tr> <td data-bbox="1686 1399 1951 1434">plate boundary</td> <td></td> </tr> <tr> <td data-bbox="1686 1434 1951 1469">ridge</td> <td></td> </tr> <tr> <td data-bbox="1686 1469 1951 1505">topography</td> <td></td> </tr> </tbody> </table>	Vocabulary		physical feature	tectonic plate	mountain	magma	mountain range	weathering	hill	fold mountain	elevation	volcanic mountain	summit	fault-block	significant	mountains dome	Ben Nevis	mountains	Grampian Mountains	contour lines	Snowdon	secondary	Helvellyn	data	Pn y Fan	atlas	Scottish Highlands	erosion	Pennines		Scafell Pike		Cambrian Mountains		Snowden		Slieve Donard		Mourne Mountains		altitude		altitudinal zone		climate		wildlife		forest		tundra		environment		adaption		plate boundary		ridge		topography

Year and Topic	N.C. Objectives	Prior Knowledge	Semantic Knowledge	Procedural Knowledge
<p>Year 4</p> <p>Rumbles</p> <p><u>Strands</u></p>	<p><b>Location Knowledge</b> Locate the world’s countries, using maps to focus on Europe and North and South America, concentrating on their environmental regions, key physical and human characteristics, countries, and major cities. Identify the position and significance of latitude, longitude, Equator, Northern Hemisphere, Southern Hemisphere, the Tropics of Cancer and Capricorn, Arctic and Antarctic Circle, the Prime/Greenwich Meridian and time zones (including day and night).</p> <p><b>Place Knowledge</b> Understand geographical similarities and differences through the study of human and physical geography of a region of the United Kingdom, a region in a European country, and a region within North or South America.</p> <p><b>Human and Physical Geography</b> Describe and understand key aspects of physical geography (<i>Earth’s layers, tectonic plates, volcanoes, earthquakes, tsunamis</i>).</p> <p><b>Geographical Skills &amp; Fieldwork</b> Use the eight points of a compass, four and six-figure grid references, symbols and key (including the use of Ordnance Survey maps) to build their knowledge of the United Kingdom and the wider world.</p>	<p>Tectonic plates are pieces of the rocky outer layer of the Earth known as the crust. Volcanic eruptions and earthquakes happen when two tectonic plates push into each other, pull apart from one another or slide alongside each other. The centre of an earthquake is called the epicentre. Significant geographical activity includes earthquakes and volcanic eruptions. These are known as natural disasters because they are created by nature, affect many people and cause widespread damage. A volcano is an opening in the Earth’s surface from which gas, hot magma and ash can escape. They are usually found at meeting points of the Earth’s tectonic plates. When a volcano erupts, liquid magma collects in an underground magma chamber. The magma pushes through a crack called a vent and bursts out onto the Earth’s surface. Lava, hot ash and mudslides from volcanic eruptions can cause severe damage. Significant volcanoes include Mount Vesuvius in Italy, Laki in Iceland and Krakatoa in Indonesia. Significant earthquake-prone areas include the San Andreas Fault in North America and the Ring of Fire, which runs around the edge of the Pacific Ocean and is where many plate boundaries in the Earth’s crust converge. Over three-quarters of the world’s earthquakes and volcanic eruptions happen along the Ring of Fire.</p>	<p>The crust of the Earth is divided into tectonic plates that move. The place where plates meet is called a plate boundary. Plates can push into each other, pull apart or slide against each other. These movements can create mountains, volcanoes and earthquakes. Over 200 million years ago, all the Earth’s continents were joined together as one supercontinent called Pangaea. Continental drift caused the supercontinent to break up and move apart to create the continents we have today. The Earth is made of four different layers. The inner core is made mostly of hot, solid iron and nickel, and the outer core is made of liquid iron and nickel. The mantle is made of solid rock and molten rock called magma. The crust is a thin layer of solid rock that is broken into large pieces called tectonic plates. These pieces move very slowly across the mantle. Convergent tectonic plates push together. Divergent tectonic plates pull apart. Transform tectonic plates slide past each other. Significant geographical activity includes earthquakes and volcanic eruptions. These are known as natural disasters because they are created by nature, affect many people and cause widespread damage. Earthquakes can cause short and long-term problems. Short-term problems include fear, injury from falling debris and loss of personal items. Long-term problems include loss of homes, lack of water and sanitation, damaged roads and transport networks and loss of jobs and services. A tsunami is a series of waves in the sea or ocean, caused by an earthquake, volcanic eruption or other underwater explosion. In 2004, an earthquake off the coast of northern Sumatra triggered a series of tsunamis that travelled across the Indian Ocean causing widespread damage and destruction.</p>	<p>Use letter/no. co-ordinates to locate features on a map confidently. Use junior atlases. Use map sites on internet. Identify features on aerial/oblique photographs. Locate places on large scale maps, (e.g globe).</p> <p style="text-align: center;"><b>Vocabulary</b></p> <p>physical feature continent supercontinent Pangea Continental drift structure layers crust mantle outer core inner core tectonic plates convergent molten magma plate boundaries volcanic eruption natural disaster geographical activity earthquake tsunami inland</p>

Year and Topic	N.C. Objectives	Prior Knowledge	Semantic Knowledge	Procedural Knowledge																																																						
<p style="text-align: center;">Year 5</p> <p style="text-align: center;">Earth in Space</p> <p style="text-align: center;"><u>Strands</u></p>	<p><b>Location Knowledge</b> Identify position/significance of latitude, longitude, Equator, Northern Hemisphere, Southern Hemisphere, Tropics of Cancer and Capricorn, Arctic and Antarctic Circle, the Greenwich Meridian and time zones.</p> <p><b>Human and Physical Geography</b> Use maps, atlases, globes and digital/computer mapping to locate countries and describe features studied.</p> <p><b>Geographical Skills &amp; Fieldwork</b> Use the 8 points of a compass, 4 and 6-figure grid references, symbols and key (including the use of Ordnance Survey maps) to build their knowledge of the United Kingdom and the wider world.</p>	<p>An atlas is a collection of maps and information that shows geographical features, topography, boundaries, climatic, social and economic statistics of an area.</p> <p>The Tropic of Cancer is 23 degrees north of the equator and Tropic of Capricorn is 23 degrees south of the equator.</p> <p>The four points of a compass are north, south, east, west.</p> <p>Latitude is the distance north or south of the equator and longitude is the distance east or west of the Prime Meridian.</p>	<p>The Northern Hemisphere is the part of Earth that is to the north of the equator. The Southern Hemisphere is the part of Earth that is to the south of the equator. The Prime Meridian is the imaginary line from the North Pole to the South Pole that passes through Greenwich in England and marks 0° longitude, from which all other longitudes are measured.</p> <p>Invisible lines of latitude run horizontally around the Earth and show the northerly or southerly position of a geographical area. Invisible lines of longitude run vertically from the North to the South Pole and show the westerly or easterly position of a geographical area.</p> <p>The Tropic of Cancer and the Tropic of Capricorn are at 23.5° north and south of the equator. The Arctic Circle and Antarctic Circle are 66.5° north and south of the equator.</p> <p>The Prime (or Greenwich) Meridian is an imaginary line that divides the Earth into eastern and western hemispheres. The time at Greenwich is called Greenwich Mean Time (GMT). Each time zone that is 15 degrees to the west of Greenwich is another hour earlier than GMT. Each time zone 15 degrees to the east is another hour later.</p> <p>Compass points can be used to describe the relationship of features to each other, or to describe the direction of travel. Accurate grid references identify the position of key physical and human features.</p> <p>The four cardinal directions are north (N), east (E), south (S) and west (W), which are at 90° angles on the compass rose. The four intercardinal (or ordinal) directions are halfway between the cardinal directions: north-east (NE), south-east (SE), south-west (SW) and north-west (NW).</p> <p>When giving a four-figure grid reference, give the two-digit eastings first followed by the two-digit northings.</p> <p>A four-figure grid reference locates a square on a map.</p> <p>Aerial photography is used in cartography, land-use planning and environmental studies. It can be used alongside maps to find out detailed information about a place, or places. Analyse and compare a place, or places, using aerial photographs. atlases and maps.</p>	<p>Use 8 compass points.</p> <p>Begin to use 4 figure co-ordinates to locate features on a map.</p> <p>Draw a sketch map using symbols and a key. Use/recognise OS map symbols.</p> <p>Analyse evidence and draw conclusions e.g. compare historical maps of varying scales e.g. temperature of various locations - influence on people/everyday life. Confidently use an atlas. <p>Year 6</p> <p>Frozen Kingdom</p> <p><u>Strands</u></p>	<p><b>Location Knowledge</b> Identify the position and significance of latitude, longitude, Equator, Northern Hemisphere, Southern Hemisphere, the Tropics of Cancer and Capricorn, Arctic and Antarctic Circle, the Prime/Greenwich Meridian and time zones (including day and night).</p> <p><b>Human and Physical Geography</b> Understand geographical similarities and differences through the study of human and physical geography of the polar regions.</p> <p>Describe and understand key aspects of physical geography: climate zones.</p> <p>Describe and understand key aspects of human geography, including types of settlement and land use, economic activity including trade links, and the distribution of natural resources including energy, food, minerals and water.</p> <p><b>Geographical Skills &amp; Fieldwork</b> Use maps, atlases, globes and digital/computer mapping to locate countries and describe features studied.</p> <p>Use fieldwork to observe, measure, record and present the human and physical features in the local area using a range of methods, including sketch maps, plans and graphs, and digital technologies.</p>	<p>An ocean is a large sea. There are five oceans on our planet called the Arctic, Atlantic, Indian, Pacific and Southern Oceans. Seas include the Black, Red and Caspian Seas. The United Kingdom is an island surrounded by the Atlantic Ocean, English Channel, Irish Sea and North Sea. The world's seven continents are Africa, Antarctica, Asia, Australia, Europe, North America and South America. Name and locate seas surrounding the UK, as well as seas, the five oceans and seven continents around the world on a world map or globe.</p> <p>The Northern Hemisphere is the part of Earth that is to the north of the equator. The Southern Hemisphere is the part of Earth that is to the south of the equator. The Prime Meridian is the imaginary line from the North Pole to the South Pole that passes through Greenwich in England and marks 0° longitude, from which all other longitudes are measured.</p> <p>Invisible lines of latitude run horizontally around the Earth and show the northerly or southerly position of a geographical area. Invisible lines of longitude run vertically from the North to the South Pole and show the westerly or easterly position of a geographical area.</p>	<p>The boundaries of the polar regions are marked by the Arctic and Antarctic Circles.</p> <p>The polar regions experience the largest differences in daylight, as the effect of Earth's tilt is much more pronounced. It is the tilt towards the Sun that creates near-constant daylight, known as polar day or Midnight Sun. The tilt away from the Sun creates near constant darkness, known as polar night.</p> <p>The Arctic is the area that is north of the Arctic Circle (66.5°N). The Arctic region is made up of the Arctic Ocean, surrounded by the continents of Europe, Asia and North America. Physical features of the Arctic include ice sheets, ice caps, mountains and hills, large rivers and lakes, tundra (areas of permanently frozen soil) and some coniferous forest. The Arctic has long, cold, dark winters and cool, light summers.</p> <p>The Arctic is a sea of ice surrounded by land and located at the highest latitudes of the Northern Hemisphere. It extends over the countries that border the Arctic Ocean, including Canada, the USA, Denmark, Russia, Norway and Iceland.</p> <p>Antarctica is a continent, located south of the Antarctic Circle (66.5°S). Most of the landscape is ice-covered mountains, glaciers or ice sheets. The South Pole (90°S) is the most southern geographical point on Earth. The Antarctic has long, cold, dark winters and cool, light summers.</p> <p>There are two oceans in Earth's polar regions. The Arctic Ocean is in the north polar region. The Southern Ocean is in the south polar region. They are significantly colder than other world oceans. This influences the presence of sea ice, glaciers and icebergs.</p> <p>The Arctic is a sea of ice surrounded by land and located at the highest latitudes of the Northern Hemisphere. It extends over the countries that border the Arctic Ocean, including Canada, the USA, Denmark, Russia, Norway and Iceland.</p> <p>Antarctica is a continent located in the Southern Hemisphere. Antarctica does not belong to any country.</p> <p>Physical features typical of the Arctic and Antarctic regions include glaciers, icebergs, ice caps, ice sheets, ice shelves and sea ice.</p>	<p>Use primary and secondary sources of evidence.</p> <p>Investigate places with more emphasis on the larger scale; contrasting and distant places.</p> <p>Use atlas symbols.</p> <p>Locate places on a world map.</p> <p>Use atlases to find out about other features of places. (e.g. mountain regions, weather patterns)</p> <p>Confidently use an atlas.</p> <table border="1" data-bbox="1686 491 2210 1481"> <thead> <tr> <th colspan="2" data-bbox="1686 491 2210 531">Vocabulary</th> </tr> </thead> <tbody> <tr> <td data-bbox="1686 531 1989 563">Polar region</td> <td data-bbox="1989 531 2210 563">snowstorm</td> </tr> <tr> <td data-bbox="1686 563 1989 595">boundaries</td> <td data-bbox="1989 563 2210 595">snowdrift</td> </tr> <tr> <td data-bbox="1686 595 1989 627">Antarctic Circle</td> <td data-bbox="1989 595 2210 627">South Pole</td> </tr> <tr> <td data-bbox="1686 627 1989 659">Arctic Circle</td> <td data-bbox="1989 627 2210 659">temperature</td> </tr> <tr> <td data-bbox="1686 659 1989 691">Midnight Sun</td> <td data-bbox="1989 659 2210 691">tundra</td> </tr> <tr> <td data-bbox="1686 691 1989 722">Polar Night</td> <td data-bbox="1989 691 2210 722">biome</td> </tr> <tr> <td data-bbox="1686 722 1989 754">Continent</td> <td data-bbox="1989 722 2210 754">climate</td> </tr> <tr> <td data-bbox="1686 754 1989 786">Country</td> <td data-bbox="1989 754 2210 786">coniferous forest</td> </tr> <tr> <td data-bbox="1686 786 1989 818">Aurora Australis</td> <td data-bbox="1989 786 2210 818">longitude</td> </tr> <tr> <td data-bbox="1686 818 1989 850">Aurora Borealis</td> <td data-bbox="1989 818 2210 850">latitude</td> </tr> <tr> <td data-bbox="1686 850 1989 882">climate</td> <td></td> </tr> <tr> <td data-bbox="1686 882 1989 914">expedition</td> <td></td> </tr> <tr> <td data-bbox="1686 914 1989 946">explorer</td> <td></td> </tr> <tr> <td data-bbox="1686 946 1989 978">food chain</td> <td></td> </tr> <tr> <td data-bbox="1686 978 1989 1010">freeze</td> <td></td> </tr> <tr> <td data-bbox="1686 1010 1989 1042">glacier</td> <td></td> </tr> <tr> <td data-bbox="1686 1042 1989 1074">habitat</td> <td></td> </tr> <tr> <td data-bbox="1686 1074 1989 1106">ice</td> <td></td> </tr> <tr> <td data-bbox="1686 1106 1989 1137">iceberg</td> <td></td> </tr> <tr> <td data-bbox="1686 1137 1989 1169">ice sheet</td> <td></td> </tr> <tr> <td data-bbox="1686 1169 1989 1201">icicle</td> <td></td> </tr> <tr> <td data-bbox="1686 1201 1989 1233">igloo</td> <td></td> </tr> <tr> <td data-bbox="1686 1233 1989 1265">Inuit people</td> <td></td> </tr> <tr> <td data-bbox="1686 1265 1989 1297">North Pole</td> <td></td> </tr> <tr> <td data-bbox="1686 1297 1989 1329">ocean</td> <td></td> </tr> <tr> <td data-bbox="1686 1329 1989 1361">seabed</td> <td></td> </tr> <tr> <td data-bbox="1686 1361 1989 1393">settlement</td> <td></td> </tr> <tr> <td data-bbox="1686 1393 1989 1425">sledge</td> <td></td> </tr> <tr> <td data-bbox="1686 1425 1989 1457">snow</td> <td></td> </tr> </tbody> </table>	Vocabulary		Polar region	snowstorm	boundaries	snowdrift	Antarctic Circle	South Pole	Arctic Circle	temperature	Midnight Sun	tundra	Polar Night	biome	Continent	climate	Country	coniferous forest	Aurora Australis	longitude	Aurora Borealis	latitude	climate		expedition		explorer		food chain		freeze		glacier		habitat		ice		iceberg		ice sheet		icicle		igloo		Inuit people		North Pole		ocean		seabed		settlement		sledge		snow

			<p>Icebergs are large pieces of frozen freshwater that have calved from glaciers, ice shelves or larger icebergs. Glaciers are slow-moving masses of ice that are made of compacted snow. Mountains are raised pieces of land that are usually covered in snow and ice. Ice fields are large areas of connected glaciers. Tundra is land where it is too cold for trees to grow as the ground is permanently frozen (permafrost). Boreal forests are large areas of land just south of the Arctic Circle where coniferous trees grow.</p> <p>Climate change is the long-term change in expected patterns of weather that contributes to the melting of polar ice caps, rising sea levels and extreme weather. Climate change is caused by global warming. Human activity, such as burning fossil fuels, deforestation, habitat destruction, overpopulation and rearing livestock, all contribute to global warming.</p> <p>Satellite images are photographs of Earth taken by imaging satellites. Use satellite imaging and maps of different scales to find out geographical information about a place.</p>

<p style="text-align: center;">Year 6</p> <p style="text-align: center;">Explorers &amp; Adventurers</p> <p style="text-align: center;"><u>Strands</u></p>	<p><b>Location Knowledge</b> Identify the position and significance of latitude, longitude, Equator, Northern Hemisphere, Southern Hemisphere, the Tropics of Cancer and Capricorn, Arctic and Antarctic Circle, the Prime/Greenwich Meridian and time zones (including day and night).</p> <p><b>Human and Physical Geography</b> Understand geographical similarities/differences through the study of human and physical geography of a region of the United Kingdom, a region in a European country, and a region in North or South America.</p> <p><b>Geographical Skills &amp; Fieldwork</b> Use maps, atlases, globes and digital/computer mapping to locate countries and describe features studied.</p> <p>Use fieldwork to observe, measure, record and present the human and physical features in the local area using a range of methods, including sketch maps, plans and graphs, and digital technologies.</p>	<p>Biomes are large areas that share similar climates, vegetation belts and animal species. They also include aquatic areas.</p> <p>The aquatic biome is the largest biome, covering nearly 75% of our planet and can be divided into two main categories: freshwater and saltwater.</p> <p>The rainforest biome is home to a variety of tropical plants and animals and found in regions that are warm all year round. Unfortunately, rainforests now cover less than 6% of our planet but still produce about 40% of our oxygen.</p> <p>The tundra biome is the coldest biome and therefore has little plant and animal variety. Tundra biomes cover approximately one fifth of the Earth's surface.</p> <p>A vegetation belt is an area with distinct plant types, determined by climate, soil, drainage and elevation.</p> <p>Maps, globes and digital mapping tools can help to locate and describe significant geographical features.</p> <p>An atlas is a collection of maps and information that shows geographical features, topography, boundaries, climatic, social and economic statistics of an area. Study and draw conclusions about places and geographical features using a range of geographical resources, including maps, atlases, globes and digital mapping.</p> <p>Satellite images are photographs of Earth taken by imaging satellites. Use satellite imaging and maps of different scales to find out geographical information about a place.</p>	<p>An ecosystem is a system of plants and animals which are interconnected and working together and an ecosystem covering a large area of a continent is called a biome. There is no exact number when it comes to types of biomes, but many people believe there are six main ones (aquatic, rainforest, tundra, desert, forest and grassland).</p> <p>Biomes are defined by a range of factors, such as temperature, climate, relief, geology, soils and vegetation. Name and locate the world's biomes, climate zones and vegetation belts and explain their common characteristics.</p> <p>Desert biomes cover about one fifth of our planet and are extremely dry areas. Depending on their location, they can be either hot or cold. Plants and animals have evolved over time to adapt to the harsh environment.</p> <p>Forest biomes are home to a variety of trees and other plants. They cover about 30% of our Earth's surface and are extremely important to our ecosystem as they store carbon and provide many materials that we use</p> <p>Most grassland biomes are made up of a variety of grasses with very few trees or large plants. The two main types of grasslands found are 'tall-grass' (humid and wet), and 'short-grass' (dry). This biome is very popular for farming due to the rich soil.</p> <p>Climate is the long-term pattern of weather conditions found in a particular place. Climates can be compared by looking at factors including maximum and minimum levels of precipitation and average monthly temperatures.</p> <p>The Earth has five climate zones: desert, Mediterranean, polar, temperate and tropical. Mountains have variable climates depending on altitude.</p> <p>Altitudinal zonation describes the different climates and types of wildlife at different altitudes on mountains. Examples include forests that grow at low altitudes and support a wide variety of plants and animals, tundra that is found at higher altitudes and supports plants and animals that are adapted to harsher environments, and the summits of mountains, which are usually covered in ice and snow and don't support any life.</p> <p>A thematic map shows information on a particular topic or theme.</p>	<p>Suggest questions for investigating. Collect and record evidence unaided. Use atlas symbols. Locate places on a world map. Confidently identify significant places and environments. Recognise world map as a flattened globe</p>

Year and Topic	N.C. Objectives	Prior Knowledge	Semantic Knowledge	Procedural Knowledge
<p>Year 6</p> <p>All About Me</p> <p>(shorter map-based topic due to production)</p> <p><u>Strands</u></p>	<p><b>Geographical Skills &amp; Fieldwork</b></p> <p>Use maps, atlases, globes and digital/computer mapping to locate countries and describe features studied.</p> <p>Use the 8 points of a compass, 4 and 6-figure grid references, symbols and key (including the use of Ordnance Survey maps) to build their knowledge of the United Kingdom and the wider world.</p> <p>Use fieldwork to observe, measure, record and present the human and physical features in the local area using a range of methods, including sketch maps, plans and graphs, and digital technologies.</p>	<p>Compass points can be used to describe the relationship of features to each other, or to describe the direction of travel. Accurate grid references identify the position of key physical and human features.</p> <p>The four cardinal directions are north (N), east (E), south (S) and west (W), which are at 90° angles on the compass rose. The four intercardinal (or ordinal) directions are halfway between the cardinal directions: north-east (NE), south-east (SE), south-west (SW) and north-west (NW).</p> <p>When giving a four-figure grid reference, give the two-digit eastings first followed by the two-digit northings.</p> <p>A four-figure grid reference locates a square on a map.</p> <p>Aerial photography is used in cartography, land-use planning and environmental studies. It can be used alongside maps to find out detailed information about a place, or places. Analyse and compare a place, or places, using aerial photographs. atlases and maps.</p> <p>Maps, globes and digital mapping tools can help to locate and describe significant geographical features.</p> <p>An atlas is a collection of maps and information that shows geographical features, topography, boundaries, climatic, social and economic statistics of an area. Study and draw conclusions about places and geographical features using a range of geographical resources, including maps, atlases, globes and digital mapping.</p> <p>Satellite images are photographs of Earth taken by imaging satellites. Use satellite imaging and maps of different scales to find out geographical information about a place.</p> <p>A thematic map shows information on a particular topic or theme.</p>	<p>A six-figure grid reference contains six numbers and is more precise than a four-figure grid reference. The first three figures are called the easting and are found along the top and bottom of a map. The second three figures are called the northing and are found up both sides of a map. Six-figure grid references give detailed information about locations on a map. Use four or six-figure grid references and keys to describe the location of objects and places on a map.</p> <p>Compass points can be used to describe the relationship of features to each other, or to describe the direction of travel. Accurate grid references identify the position of key physical and human features. Use compass points, grid references and scale to interpret maps, including Ordnance Survey maps, with accuracy.</p>	<p>Use 8 compass points confidently and accurately.</p> <p>Use 4 figure co-ordinates confidently to locate features on a map.</p> <p>Begin to use 6 figure grid refs; use latitude and longitude on atlas maps.</p> <p>Locate places on a world map.</p> <p>Use atlases to find out about other features of places. (e.g. mountain regions, weather patterns)</p> <p>Confidently identify significant places and environments.</p> <hr/> <p style="text-align: center;"><b>Vocabulary</b></p> <p>Northern Hemisphere</p> <p>Southern Hemisphere</p> <p>equator</p> <p>Prime Meridian</p> <p>North Pole</p> <p>South Pole</p> <p>longitude</p> <p>latitude</p> <p>vertical</p> <p>horizontal</p> <p>compass</p> <p>north</p> <p>east</p> <p>south</p> <p>west</p> <p>north-east</p> <p>south-east</p> <p>south-west</p> <p>north-west</p> <p>coordinate</p> <p>grid reference</p> <p>four figure</p> <p>six figure</p> <p>eastings</p> <p>northings</p> <p>locate</p>
